

ABSTRACT

A wireless communication terminal, which performs wireless communication with base stations using each of a first communication method and a second communication
5 method and enables to be in an idle state with both methods, having a setting section that sets a suspend time for detecting an incoming call from the base station using the first communication method subsequent to completion of communication with the base station using the first
10 communication method; and a determination section that determines a cause of the completion of communication with the base station, wherein the setting section sets the suspend time based on the cause of completion of communication determined by the determination section.
